An Evaluation study of Outreach of Microfinance Institutions in Yemen

Dr. Abdulelah Mohsen Yahya Alokam* & Eissa HasanAboHulaika**
Head of Department, Management Information System, Future University, Sana’a, Yemen
Head of Department, Documentation, Research and Development Center, Sana’a, Yemen
**Assistant Professor, Department of Business Administration, Yemeni Jordanian University, Sana’a, Yemen.

Abstract: The main objectives of this paper are to evaluate the outreach of microfinance institutions in Yemen. The study based on both primary and secondary data. The primary data was collected through questionnaire while the secondary data was collected through books, microfinance institutions websites, microfinance institutions Annual Reports, and social fund for Development, etc. The study found that microfinance institutions in Yemen have less outreach scope in terms of growth in the number of microfinance active clients, microfinance loan portfolio. However, the study found that microfinance institutions have good outreach scope in terms of depth of outreach. The study suggested that MFIs should maintain the growth of outreach by attaining institutional sustainability by bringing down the administrative/operational costs to a lower level. The study also suggested that micro finance institutions should integrate various microfinance products.

Keywords: Microfinance Institutions, Microfinance loan Portfolio, Outreach, and Depth of Outreach.

1.1 Introduction

According to (Kasim & Jayasooria, 2001) microfinance is defined as a process of lending small amounts of money to MSEs or poor people with no access to conventional financing services so that they can start or invest their own enterprises and thus improve their income which in return reduce poverty and have better future. (Armendariz & Labie, 2011) stated that microfinance emerged in 1970s in the form of microcredit provision, but then namely in the last decade many of microfinance institutions (MFIs) began expanding their financial services like saving, transfer of money, insurance, training and technical support for micro and small enterprises as well as the poor.

The evolution of Microfinance was in Yemen in 1997 by the Social Fund for Development. Performance concept relating to micro finance institutions is an important to donors, investors, Micro Finance Institutions (MFIs), Non- Governmental Organizations (NGOs) and policy makers. This study is very significant as it is the first study in the country to evaluate the outreach of MFIs with regard to growth in microfinance active clients, growth in microfinance loan portfolio and depth of outreach.

Outreach:

Outreach can be defined as number of customers served. The term outreach indicates the extent of reach of MFIs to their clients. Outreach is typically used to refer to the effort by MFIs to provide loans and financial services toward the poorest of the poor (depth of outreach) (Conning, 1999). In fact, depth of outreach can be defined as reaching the poorest, but providing large number of loans to people even if they are relatively less poor is breadth of outreach.

Thus, reaching the poorest is depth of outreach, but reaching large number of people even if they are relatively less poor is breadth of outreach (Schreiner, 2002). (Hermes, Lensik, & Meestres, 2011) Presented the similar views. They stated that outreach is to provide credit to the poor who cannot get access to commercial banks, so that poverty can be reduced and help them setting up their own income generating businesses. This study analyzed outreach of MFIs from three indicators such as growth in the number of active micro finance clients, growth in micro finance loan portfolio and depth of outreach.
Outreach Indicators:

These indicators show the extent of outreach of MFIs. They take into consideration the the expansion of the microfinance portfolio, growth in the number of the active clients, and depth of outreach.

A) Growth in Microfinance Loan Portfolio
B) Growth in Number of Active MF Clients
C) Depth of Outreach

1.2 Review of literature

Kaur, Ravinder\textsuperscript{a} “Outreach of Microfinance in India” The main objective of the paper is to study the outreach and trends of Microfinance Industry in India. The microfinance industry is growing at a fast pace and can be understood as a supplement to poverty alleviation programmers in India.

Lafourcade, A., Isenr, J., Mwangi, P., and Brown, M(2005)\textsuperscript{viii}, Overview of the Outreach and financial Performance of Microfinance Institutions in Africa”, the study stated that MFIs in Africa are dynamic and perform favorably compared with their counterparts in other global regions. Indeed, African MFIs lead the world in savings mobilization, in both the number of clients served and the absolute volume of savings on deposit. Although the result of this study indicate that the overall financial performance of MFIs in Africa lags behind other global regions, a growing number of MFIs-especially regulated and cooperative MFIs-are profitable.

Hermes, N., Lensink, R., and Meesters, A\textsuperscript{viii} paper entitled “Outreach and Efficiency of Microfinance Institutions,” This paper has used SFA to determine whether there is a trade-off between efficiency of MFIs and outreach to the poor. Using a sample of more than 1,300 observations. It was found that outreach is negatively related to efficiency of MFIs. Also, it was found find that MFIs that have lower average loan balances, which is a measure of the depth of outreach, are also less efficient. Moreover, we find evidence showing that MFIs that have more women borrowers as clients – again a measure of the depth of outreach are less efficient.

Gebremichael, B. Z. (2013)\textsuperscript{viii} study entitled “Efficiency, Outreach and Sustainability of Ethiopian Microfinance Institutions.” This study aims to examine the performance of Ethiopian Microfinance institutions (MFIs) focusing in terms of efficiency, outreach and sustainability. The Technical efficiency of Ethiopian MFIs were estimated using the preferred DEA approach. Under the DEA, efficiency scores are calculated for both constant returns to scale (CRS) and variable returns to scale (VRS) assumptions to shed light on the potential impact of scale differences on efficiency. Based on constant returns to scale, the study found that average technical efficiency of the MFIs ranges from 0.524(52.4%) in 2004 to 0.775(77.5%) in 2009 with an overall mean efficiency of 0.667 (66.7%). This implies that Ethiopian MFIs, on an average, could have increased their output by 33.3 % using the existing level of inputs (without any additional inputs). Regarding the sources of technical inefficiency, it has been noticed that the observed technical inefficiency in the Ethiopian microfinance industry is due to both poor input utilization (i.e., managerial inefficiency) and failure to operate at most productive scale size (i.e., scale inefficiency).

Kaur, Prabhjot (2014)\textsuperscript{a} Paper entitled, “Outreach and Sustainability of Microfinance Institutions in India in Pre and Post Andhra Pradesh Microfinance Crisis in Context of South Asia”, in this paper an attempt has been made to examine, crucial aspects related to financial sustainability and outreach of MFIs in India, in context of South Asia, in pre and post Andhra Pradesh crisis. For the purpose of comparing outreach and sustainability of Indian MFIs with their counterparts in South Asia, data is collected from Microfinance Information Exchange database, for the year 2008 and 2012 (pre and post Andhra Pradesh microfinance crisis period respectively) . It is clear that Operational Self Sufficiency(proxy for sustainability of MFIs) of Indian MFIs has declined from 2008 to 2011 to the extent to make them operationally non sustainable. Operational Self Sufficiency (OSS) less than 100 per cent shows operations of MFIs are not sustainable and their incapacity to recover their operational costs from the operational revenue.

1.3 STATEMENT OF THE PROBLEM

In spite of the growth of microfinance institutions in the country and the importance role of microfinance institutions in the development of the economy of the Yemen, and the review of
literature, the researcher would like to evaluate the outreach of microfinance institutions in Yemen.

### 1.4 OBJECTIVES OF THE STUDY

The main objectives of this study are as follows:

1. To evaluate the performance of MFIs in Yemen in terms of outreach with regard to the growth in the number of active microfinance clients.
2. To evaluate the outreach of MFIs in Yemen with regard to the growth in microfinance loan portfolio.
3. To evaluate the outreach of MFIs in Yemen in terms of depth of outreach.

### 1.5 RESEARCH METHODOLOGY

For evaluating the outreach of microfinance institutions in Yemen, the data was collected during the mid of December 2015 from various microfinance institutions in Yemen. The results are based on both primary and the secondary data collected from the records of the MFIs Annual Reports, MFIs Websites, Social Fund for Development, Yemen Microfinance Network, Microfinance Magazine, MFIs websites, etc.

#### 1.5.1 Sample of the Study:

The sample procedure used in the questionnaire is non-probability sampling due to the nature of data available. The sample size for the questionnaire was 11 MFIs located in 4 governorates (Al-Amanah, Sana'a, Aden and Hadramaut) which represent 78 percent of all micro finance institutions in Yemen.

#### 1.5.2 Sources of Data Collection used:

The research relies on the use of the deductive method. For this study, the researcher has used both primary and secondary data. Primary data was collected from questionnaire survey and open-ended interview. The secondary data was collected from reviewed literature, books, academic articles, and information provided in annual reports of microfinance institutions and websites.

#### 1.5.3 Data analysis

The collected data was analyzed based on Micro Rate and Inter-American Development Bank (2003) and Philippine Microfinance Standards, (2007). The data was analyzed in three aspects a) Growth in Microfinance Active Clients, Growth in microfinance loan portfolio, and depth of outreach.

Source: Primary Data.

It is observed in the Table No. 3 that the general standard is greater ≥5% (Greater than or equal to 5%). It has been reported that all MFIs in Yemen are less than the standard criteria mentioned above. For instance, Al-Amal MF Bank has 0.33%, while National MF Foundation has 0.22% and Wadi Hadramaut MF Program has 2.12%. The rest of other MFIs also have less than the standard criteria mentioned above. The mean was 0.53 which indicates that MFIs have less outreach scope in terms of number of active MF clients.

Graph 1
Growth in the Number of Active MF Clients as in December, 31 2014

Source: Primary Data.
It is observed in the Table 3 that the general standard is greater ≥5% (Greater than or equal to 5%). It has been analyzed that all MFIs in Yemen are less than the standard criteria mentioned above. For instance, Al-Amal MF Bank has 0.45%, while National MF Foundation has 0.35% and WadiHadrmat MF Program has 1.52%. The rest of other MFIs also have less than the standard criteria mentioned above. The mean was 0.45 which indicates that MFIs have less outreach scope in terms of growth in the number of MF loan portfolio.

Graph 2
Growth in Micro Finance Loan Portfolios in December, 31 2014

Source: Primary Data.

It is observed in the Table 3 that the general standard is not exceeding 20%. It has been analyzed that Nama MF Program has 8.75% While Azal MF program has 7.35% and National MF Foundation has 7.29%. And that WadiHadrmat for Lending and Saving Program has 6.90% while Al–Amal MF Bank has 5.51%. The Arithmetic Mean is 6.87% which indicates that Micro finance institutions in Yemen have good outreach scope in terms of depth of outreach.
1.6 FINDINGS OF THE STUDY

The major findings of the study was that most Microfinance institutions in Yemen do not have outreach in terms of growth in the number of active clients, growth in the number of microfinance loan portfolio. In the contrast, the study found that most microfinance institution in the country have good outreach in terms of depth of outreach.

1.6.1 Specific findings

1. Most Microfinance institutions in Yemen have less outreach scope in terms of growth in the number of Active MF clients. The general standard is greater ≥5% (Greater than or equal to 5%). It has been analyzed that all MFIs in Yemen are less than the standard criteria mentioned above. For instance, Al-Amal MF Bank has 0.33 percent, while National MF Foundation has 0.22 percent and WadiHadramaut MF Program has 2.12 percent. The rest of other MFIs also have less than the standard criteria mentioned above. The mean was 0.53 percent which indicates that MFIs have less outreach scope in terms of number of active MF clients.

2. Most Microfinance institutions in Yemen have less outreach scope in terms of growth in micro finance loan portfolio. The general standard is greater ≥5% (Greater than or equal to 5%). It has been analyzed that all MFIs in Yemen are less than the standard criteria mentioned above. For instance, Al-Amal MF Bank has 0.45 percent, while National MF Foundation has 0.35 percent and Wadi Hadramaut MF Program has 1.52 percent. The rest of other MFIs also have less than the standard criteria mentioned above. The mean was 0.45 which indicates that MFIs have less outreach scope in terms of growth in the number of MF loan portfolio.
3. Most microfinance institutions in Yemen have good outreach scope in terms of depth of outreach. The general standard is not exceeding 20%. It has been analyzed that Nama MF Program has 8.75% While Azal MF program has 7.35% and National MF Foundation has 7.29%. And that Wadi Hadramaut for Lending and Saving Program has 6.90% while Al –Amal MF Bank has 5.51%. The Arithmetic Mean is 6.87% which indicates that Micro finance institutions in Yemen have good outreach scope in terms of depth of outreach.

1.7 SUGGESTIONS
The major suggestions are as follows:
2. To increase the outreach, the MFIs should combine and rearrange the outreach aspects based on their strength. MFIs usually have high length and can focus on scope, cost, worth and breadth.
3. Government should take its responsibility by supporting MFIs financially or technically at least to reach, OSS, Efficiency, FSS and expand outreach.
4. MFIs could also able to maintain the growth of outreach by attaining institutional sustainability by bringing down the administrative/operational costs to a lower level.
5. It is also suggested that micro finance institutions should make an Integration of various microfinance products.
6. It is suggested that micro finance institutions should customize financial products and delivery systems.
7. It is also suggested that microfinance institutions should adopt multiple lending models.
8. It is also suggested that there should be partnership and inter collaboration of MFIs.
9. It is also suggested that microfinance institutions in the country should enhance the role of research and development.
10. It is also suggested that MFIs should implement a strategic plan for expansion and diversification of financial, technical products and services supplied to SMEs.
11. It is also suggested that MFIs in Yemen should increase the institutional capacity building and development.
